Chapter 1: Introduction

This is the introduction chapter. It demonstrates how internal links work in PDF documents. You can click on the Table of Contents entries to navigate between chapters. This example also shows how to create bookmarks (outlines) that appear in the PDF viewer's sidebar.

Section 1.1: Getting Started

This is a subsection within Chapter 1. Notice how it appears indented in the bookmark sidebar.

Chapter 3: Conclusion

This example demonstrates the core functionality of PDF links and bookmarks. These features are essential for creating professional, user-friendly PDF documents. The bookmarks appear in the sidebar (outline panel) of most PDF viewers, providing quick navigation.

Summary

Key features demonstrated: `AddLink()`, `SetLink()`, `Link()`, `LinkString()`, and `Bookmark()`.

Page Navigation Demo

This document has 3 pages. We are currently on page 4. Using `SetPage()`, we can navigate to any existing page and add content there.

Navigating to page 1 to add a note...

Note: This text was added using `SetPage(1)` after creating all 4 pages!
